Abstract of RU2166858
food-processing industry. SUBSTANCE: method involves grinding raw material; holding in reactor while providing continuous mixing at temperature of 45-50 C in 3-5% edible salt solution. Solution and raw material are used in the ratio of 5:1-6:1.5, respectively. Upon termination of holding process, emulsion is separated. Method allows emulsion with increased conversion of collagen and elastin fraction protein to be obtained. EFFECT: increased efficiency and reduced production cost. 2 ex
